THULEMA

Thulema creates 21st century furniture for the offices and public space of the 21st century people. The quality of our work is underlined with the highest standards – this applies to our process of thinking, to the interaction with our client and to the work undertaken when creating, compiling and installing our furniture.

METOD

Being and doing things together isn't just entertaining – it's also unbelievably efficient. The flowing ideas can be spotted mid-air and then developed further in a split of a second. By inspiring each other, an enthused atmosphere is easily created and the work itself becomes finished almost en passant.

Often, the outside support and idea-rich soil can even go unnoticed – so strong is the focus on the shared space and the goal. Many businesses have already understood the actual force of teamwork and are shaping their working environments with the bustling of a busy market place in mind. Metod product range has been created exactly for that – to help people work and achieve their goals together.

OPEN SPACE

Metod has been created by following the ideology of a modern open office space. Its goal is to create a space which allows people to interact naturally, freely and quickly. This is why Metod office furniture is not only made up of a chair and a desk, but truly ables to create practical, work space joining units.

TEAMWORK

Metod is created for businesses centered around teamwork. For teamwork to carry on outside the meeting rooms, the environment has to predispose natural interaction and sharing one's ideas.

To enforce the effect of working together, Metod ables to create work space clusters for two, four, six or more people, and due to the additional elements of the set, every team member can design his work area according to his specific needs.

STRUCTURE OF WORK SPACE

A good work space is based on stability. Visually light Metod finds its support from a rigid steel frame which also provides fixings for all the additional elements: the desk mounted screens and small shelves, and the handy storage spaces below the work surface.

SIMPLICITY

There is nothing overabundant or lacking in Metod. The well thought-through elements let you create various work areas from a classic single work space up to a hall-length cluster office space.

FLEXIBILITY

By adding and dividing the elements, the furniture shall remain more flexible through-out time and space. Due to the strong frame, the furniture can be moved countless times.

ECONOMICAL

We have optimised the number of details for an economical material usage. For example, when compiling four work spaces, the table has five time as fewer legs as by compiling the work space from separate tables.

10

ADDITIONAL ELEMENTS

The smarter the usage of space, the more efficient the business. Metod's additional elements allow one to use his desk space as versatilely as possible.

The shelves fixable to the felt screen help to keep the documents in order and the fixable board is perfect for all kinds of reminders.

The design of the additional elements is beckoning and handy to provide a pleasurable sight, yet simple and discreet enough to allow you to concentrate on the most important: the work on your desk.

INTEGRATED CABLE SYSTEM

Metod allows you to hide the cable clusters in the channel below the desk. Cables which aren't moved on a daily basis remain hidden in the channel, whilst a mobile phone or a laptop can easily be charged in the outlet in the middle of the desk.

MATERIALS

Metod is built from the best materials. Its modular steel frame is coated by using a nature-friendly powder painting technology and the work surface is coated with a durable melamine cover. The central keel and drawer facades are made of strong MDF boards and brushed up with water-based colours. The system gains its softness and warmth from the screens covered with synthetic felt.

ELEMENTS

Work the way you like. When compiling a Metod set, first consider the measurements suitable for the work area and then proceed to choosing a suitable drawer system.

For creating individual combinations, one can choose between the colour of the table frame, the colour of the work surface finish, central keel and drawer facades.
